

LOGO panel with 8 tie points

PRODUCT INFORMATION

LOGO panel 270 x 90 cm with 8 tie points

Perfect as wall and foundation formwork

The PASCHAL LOGO panel 270 x 90 cm with 8 tie points has, in addition to the usual holes for ties on the panel frame, four further tie points inside the panel.

As a result, it is perfect for wall formwork (vertical) and also for foundation formwork (horizontal). The LOGO panel 270 x 90 cm with 8 tie points is available for LOGO.3 wall formwork as well as in the aluminium version LOGO.alu.

Benefits

- Four outside and four inside holes for ties make it useful for a wide range of applications
- Vertical and horizontal use
- Use as foundation forming, for height extensions and small wall heights, beams, parapets, wall extensions, etc.
- Complete panel series is available in 90 cm height
- Compatible with all PASCHAL systems

Versatile application options

For vertical use, anchors are usually placed directly next to the panel frame so that the adjacent panel can also be tied at the same time. For small concreting heights such as foundations, parapets, small wall heights or kickers, the LOGO panel 270 x 90 cm is used horizontally and only requires a small number of connecting pieces for a width of 270 cm.

However, it is not always possible to use the lower tie point, which in this case is just above the frame. For this purpose, there are additional internal openings at a distance of 27.5 cm from the frame.

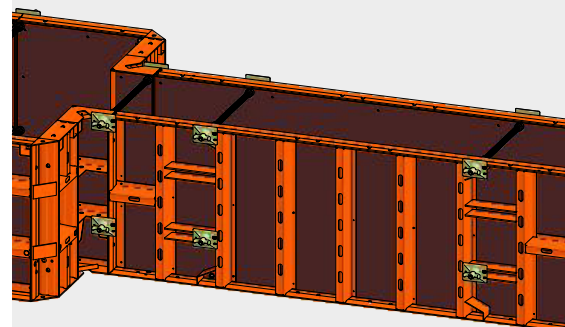

All holes for ties – outside and inside – are placed symmetrically.

Four outside and four inside holes for ties make it useful for a wide range of applications.

The LOGO panels are available in both steel and aluminium.

The LOGO panel 270 x 90 cm allows choice in positioning the tie rod.
