

PASCHAL Ident

PRODUCT INFORMATION

PASCHAL Ident

The "fingerprint" for formwork using RFID technology

PASCHAL Ident technology gives each fitted formwork panel an electronic number and hence provides an identity that cannot be changed, similar to the human fingerprint. This ensures unique and unmistakable identification. All NeoR, modular, LOGO.3 and LOGO.pro formwork panels are equipped with RFID technology.

Benefits

- Automatic monitoring of inventories and systems
- Simplified maintenance processes
- Tracking of goods along the entire supply chain
- Affordable and resistant to construction site influences
- Simple and fast detection by means of a reader
- Creates the preconditions for other forms of financing such as leasing

Personalised formwork

This technology is being introduced into formwork technology with PASCHAL Ident. The transponder is addressed by induction. This is sufficient for it to send its information back to the reader. This technology for unequivocal identification is unmistakable and inexpensive. Not only that: In contrast to barcodes, spots of paint or other tags, it is integrated into the system and is resistant against damage on the construction site.

Tailor-made solutions for PASCHAL clients

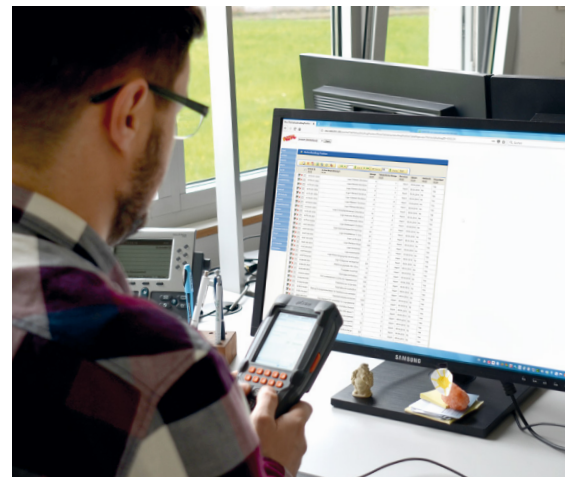

PASCHAL Ident offers a further plus when it comes to matters of financing: In this way, the institutions financing the formwork panels equipped with transponder chips as standard can be offered a "formwork system including accessories" as economic security for the overall investment.

Unmistakable identity of the formwork panels

The transponders are installed in the outer frame of the formwork panels. These can be seen in the circular depression in the outer frame.

PASCHAL Ident technology gives each formwork panel an electronic number and hence provides an identity that cannot be changed, comparable with the human fingerprint.

The data is available as a desktop version and a handheld scanner.

LOGO.3 and LOGO.pro wall formwork

NeoR and Modular/GE universal formwork
