PASCHAL Custom formwork

Object-related solutions for special cases of application

For special fields of application like formwork for columns, piers and shafts or tunnels and vault constructions PASCHAL is working at special formwork solutions for extraordinary geometries and high number of reuses in close co-ordination with its customers.

Modern formwork systems are capable of providing building contractors with rational formwork solutions consisting of system components for most concrete structures.

With its Universal Formwork System Modular/GE, its Wall Formwork LOGO.3 and Trapezoidal Girder System, with adjustable radii, PASCHAL has pushed the feasibility limits for system formwork out even further. But even so, there are still certain shapes and surfaces which cannot be produced with any system formwork. For example, whereas smaller fittings and inlays for system formworks or supplementary formwork can be used usually without any problems. To create or add special concrete surfaces on the job site, this is rarely the case and usually not the most economical solution where larger custom formwork is concerned.

Custom formwork needs meticulous preparation. Usually it is planned with modern CAD systems and created with corresponding workload in carpentry businesses or metal fitters, and erected for test purposes as required. This is usually not possible on the job sites where sufficient space, time, experts and necessary equipment are simply not available.

Therefore fewer and fewer building contractors attempt to create such custom formwork themselves, but outsource such services to their formwork supplier who has the necessary prerequisites and vast experience with custom formwork.

PASCHAL's custom formwork department offers a professional all-in service for custom formwork.

Benefits:

- Individual and project-related solutions
- Professional ready-on-site service
- Optimised handling
- Minimised time for assembly
- High number of reuses
