Service in Formwork + Shoring

PPL 10.0

PASCHAL-Plan light

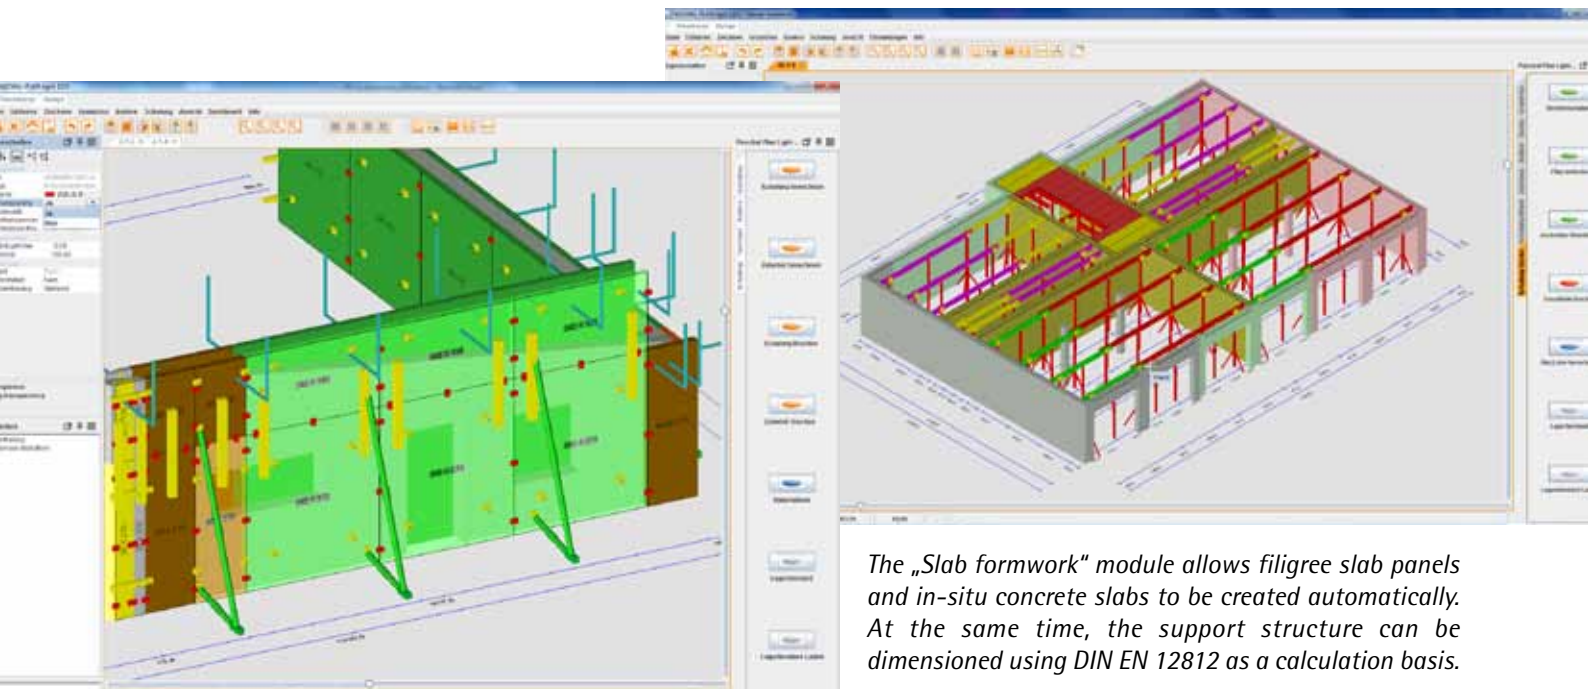

The PPL 10.0 formwork software supports the entire construction phase throughout the concrete engineering project and also manages materials using the „Warehouse“ module. PPL version 10.0 features a cloud connection, 3D visualisation and the slab formwork module for in-situ concrete slabs and filigree slab panels.

„Design“ module for the formwork systems Modular/GE, LOGO.3, TTR, PASCHAL Deck

- 3D visualisation
- Interfaces for import and export
- Extended layout input (gable walls, slopes on the upper side of walls or floor slabs)
- Integrated CAD functions
- Several formwork systems can be used in one project
- Dynamic material list available

„Warehouse“ module

- Complete warehouse management (formwork, building equipment, construction machines, accessories etc.)
- Clear site management (delivery, return, stock controls)

The „Slab formwork“ module allows filigree slab panels and in-situ concrete slabs to be created automatically. At the same time, the support structure can be dimensioned using DIN EN 12812 as a calculation basis.

The „Transparent“ function in the „Design“ module enables everything behind the formwork to be displayed. As such, all installations and fillers can be visually captured.
