# Climbing system 240cm

With the climbing bracket 240 cm PASCHAL wall formwork systems can be also used as climbing formwork. This is especially an advantage for building a structure in several height phases.

A complete climbing unit consists of climbing platform (bracket + planking), formwork, concrete and suspended scaffold and can be moved with only one crane cycle. Hereby efficient and economic work sequences can be achieved.

- Can be adjusted up to +/- 15 degrees on the geometry of the structure
- High load-bearing capacity
- Saving of time and costs by transposing of larger formwork units
- Long service life and functionality by hot-dip galvanizing as surface protection
- High degree of safety at work by working space in front of and behind the formwork
- Little transport volume by modular construction

## Technical Data

Bracket depth:	2,40 m
Live loads:	Working platform: 4,5 / 3,0 kN/m <sup>2</sup> Concrete platform: 1,5 kN/m <sup>2</sup> Suspended scaffold: 1,0 kN/m <sup>2</sup>
Inclination:	+ / - 15°
